August 2016 to Present

Additional Information

I have a rounded technology experience as I am adept at using core command line tools appropriately like sed and awk in Unix and Powershell in Windows. I develop websites for my friends as a hobby, mainly using the 960Grid system. I am studying responsive web design as well.

I would dare say that I am an asset to every environment because the width of my skills has made me an innovator as I tend to push the envelope for change in my place of work. I would love to work fully as a developer in the midst of others like myself.
